SUBJECT: Self Belay Compliance
FROM: Jacques Christinet, CEO Kanopeo GmbH, Basel

To Whom It May Concern:

The Self Belay from Safety Engineering is categorized as an EN 362:2004/T compliant connector. Kanopeo has evaluated this connector and has approved the use with the Safety System named SAFEROLLER and als the Safety System named SPEEDRUNNER.

The Self Belay can be used with both above mentioned Safety System SAFEROLLER and SPEEDRUNNER as long as the connector maintains the status of a CE EN 362 approved connector.

USE of Self Belay connected to SAFEROLLER or SPEEDRUNNER : The use of the Self Belay involves additional installation considerations which must be taken into account before installation. Every time it is mandatory to evaluate all the possible consequences of the interaction of different technologies. It is the responsibility of the operator and of the installer to ensure that these considerations have been adequately addressed. Examples of such considerations are (but not limited to): Instructions for use, additional harness modifications for correct use, installation of the Self Belay key as part of the installation of the Safety System used, additional inspection criteria, and additional service criteria.

These additional considerations are not part of the SAFEROLLER or SPEEDRUNNER user manual. Please refer to the user manual supplied with the Self Belay. Any questions regarding the function, design or use of the Self Belay should be directed to:
